

Cloud Computing Tutorial 2

Demonstration of a PaaS Application: Creating a Trailblazer App on Salesforce Trailhead

Observation:

Tutorial 2:
Demonstration of PaaS Application:
Creating a Trailblazer App

- What is PaaS?
PaaS (Platform as a service) is a cloud computing model that provides a platform for developers to build, run and manage applications without worrying about infrastructure like OS, servers, storage or networking.
- Benefits
 - reduces the need for infrastructure management
 - speeds up application development & deployment
 - provides built-in development tools & services
 - supports scalability and easy maintenance
 - reduces volatility and operational costs
- Examples of PaaS platforms:
 - * Salesforce: Provides tools to develop & run business apps on its cloud
 - * AWS Amazon: Allows developers to deploy & manage applications automatically on AWS infrastructure
 - * Google App Engine: Enable developers to build & host scalable web applications on GCP

P.T.O

- Introduction to Salesforce & Trailhead
- Overview of Salesforce as a CRM & a PaaS platform
Salesforce is a cloud based customer Relationship Management (CRM) platform used by organisations to manage customer data, sales processes, marketing activities, and customer support services.
In addition to CRM, Salesforce also acts as PaaS platform that enables developers to create and deploy custom applications using its tools & services.
- What is Trailhead?
Trailhead is the official online learning platform provided by Salesforce. It offers interactive learning modules, projects and quizzes that help users gain knowledge & practical experience in Salesforce admin and related techniques.
- Building applications using Salesforce Lightning
Salesforce Lightning is a modern framework used for developing apps on the Salesforce platform. It enables developers to build responsive & dynamic user interfaces using Lightning components. Developers can also use Apex programming and Salesforce tools to create scalable and efficient applications.
- What is a Trailblazer playground (Salesforce Developer Environment)?
It is a personal Salesforce environment for learning, experimenting & building applications.

- Intro to Lightning App Builder
It is a low code app development tool used to design and customize user interface. It enables developers & admins to create pages for apps, records, home screens using a drag & drop interface without extensive coding.
- What is Process Automation in Salesforce?
Process automation in Salesforce refers to using tools & workflows to automatically perform tasks and business processes. It helps reduce manual work by triggering actions such as sending emails, updating records or creating tasks.
- Intro to Flow Builder & Process Builder
- Flow Builder: A powerful automation tool in Salesforce that allows users to create complex workflows using a visual interface.
- Process Builder: A point and click automation tool used to define if-then logic for automation business processes like updating records or sending notifications.
- How to test & debug app
- Deploying the app in a Sandbox environment
A sandbox in Salesforce is a testing environment that copies the main system. Developers deploy & test applications in the sandbox to ensure they work correctly before releasing them to production.

HubSpot demonstration:

The screenshot displays the Salesforce Trailhead homepage. At the top, there's a navigation bar with links for Products, Industries, Customers, Events, Learning, Support, and Company. Below this, a 'Trailhead' section contains tabs for Today, Learn, Community, Career Growth, Certifications, and Help. A large welcome message reads 'Nice to see you, Poorvi!' accompanied by a progress bar indicating 0 points towards the Hiker rank. A 'Personalize your learning journey' banner prompts the user to answer questions for recommendations. The 'Recommended to Me' section features a badge for 'Artificial Intelligence Fundamentals', described as learning the basics of AI, with a '+100 Points' reward.
